

ReachOA

SIMPLIFYING
END-TO-END
**DIGITAL
PUBLISHING**

ReachOA

ReachOA is a stand-alone platform that also renders itself as part of the EnableOA ecosystem. It adds ease to the open access format of publishing and extends the culture of openness to the world of publishing.

WHY REACHOA?

In a manual setting, authors face many roadblocks in sourcing, licensing, reviewing, and revising content. It is labor intensive and inefficient with time.

The main aim of ReachOA is to overcome the existing roadblocks and to bring digital production to the existing traditional format of journaling. It is designed to digitize content publishing.

HOW DOES IT WORK?

- Automated end-to-end journal publishing system
- HTML workflow replaces conventional PDF peer review and author proofing: peer reviews and author proofing via a browser
- Dedicated math and table features/functions in a collaborative editing environment
- Coordination of the review process through an integrated notification system
- Real-time rating form for reviewers /editors

ADVANTAGES OF REACHOA

- URL validation for DOI submissions
- A role-specific approach to handling manuscripts
- Using Wax 2 in the browser to edit content
- Discreet versus shared peer reviews
- Automated email notifications
- Real-time communication with authors and editors, including video chats
- Third-party application integration like Grammarly to provide enhanced copyediting
- Provide editors the ability to summarize and critique article submissions
- Several peer-review modules supporting blind, double-blind, and open review
- Verifying plagiarism
- Manuscripts are automatically structured based on journal requirement
- Automatic creation/validation of reference linking
- Rule-based automation of few copyediting aspects such as punctuation and consistency

REACHOA SUITE

The Amnet ReachOA suite offers authors:

Content acquisition

From the very outset, with manuscript submission, all forms of peer review until the last step of acceptance.

Content enrichment

We access and provide all forms of styling, which include copyediting, design, typesetting, and proofing.

Content transformation and delivery

We provide the author with delivery of the work in EPUB, HTML, Web PDF, Print PDF, and final XML formats.

Hosting and integration

Since our platform works online and in a digital sphere, we offer superior hosting services with integration with Crossref and ORCID, which makes research easier.

Indexing services

We help with forms of indexing and meta tags for PMC and Google Scholar, thus making journaling quicker.

Migration and customization.

Theme development

We produce custom themes and original creative artworks for authors.
